

A Faster Path to Risk Mitigation and Compliance

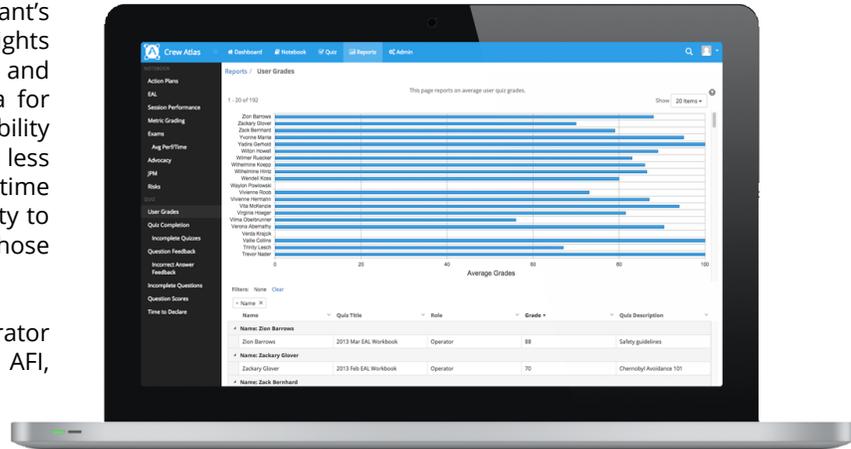

Both the NRC and INPO pay close attention to your plant's ability to self-identify weaknesses from within. Deep insights into crew performance enhance your ability to avoid and mitigate the risks associated with being issued an Area for Improvement (AFI). Plants that can demonstrate their ability to pinpoint and correct deficiencies themselves are much less likely to incur the expense of an AFI. An automated, real-time view into crew performance not only improves your ability to identify problems, but increases the velocity with which those problems can be corrected.

For example, one station received an AFI in the INPO operator fundamental of "teamwork". To correct and close this AFI, station personnel specifically observed how each crew performed with respect to teamwork in the simulator, using paper grading sheets to record and process their findings:

- Observers filled out the paper sheet during an observation
- Observers aggregated all scores
- Sheets were sent for transcription into Excel spreadsheets
- Excel spreadsheets were sent to program leads who then manipulated into graphs/pivot tables.

In short, this was a highly-manual, labor-intensive process. After spending several years' equivalent in man hours digesting one year's worth of data, this plant found the issue laid with one crew's Shift Manager and the culture he instilled. The station removed this Shift Manager's qualification and assigned a new one. That one crew's performance in teamwork immediately started to rise; however, the delay in simply being able to make this decision was extensive.

CrewAtlas automates this entire process, influencing positive results much faster than possible with a manual system. CrewAtlas centralizes all of your crew performance data and

provides you with real-time reporting so you can easily identify problems as they surface and act quickly to take corrective action. Accessible through desktop stations and mobile devices, CrewAtlas is on the floor with your observers, delivering instant access to crew performance and eliminating the need for costly data manipulation and processing.

Simplify Crew Critiques

Reduce instructor burden with detailed reports and automated grading that provide deep insight into operator, crew and fleet performance.

CrewAtlas role-based dashboards and dynamic reporting provide instant insights into crew performance allowing the Shift Manager to view an individual crew, an Operations Director to view an entire site population, or a Fleet Director to assess crew performance across an entire fleet. Custom observation guidance and action plan tracking enable the targeting and monitoring of corrective actions as they are applied.

Crew performance issues are going to arise. CrewAtlas helps you identify those problems fast, from any perspective, to mitigate risk and ensure compliance – on every crew and across the fleet.

To learn more about how CrewAtlas with CrewQuiz can enhance your crew notebook, or to request a demo of CrewAtlas, please call us at (844) 217-4480 or email info@crewatlas.com.
